

A Correlation of sunshine hours and solar irradiance estimates

Measured sunshine hours from six different sites in Nigeria was found in [Manfred J. Muller \(1982\)](#), but was left out of the project due to the data being outdated.

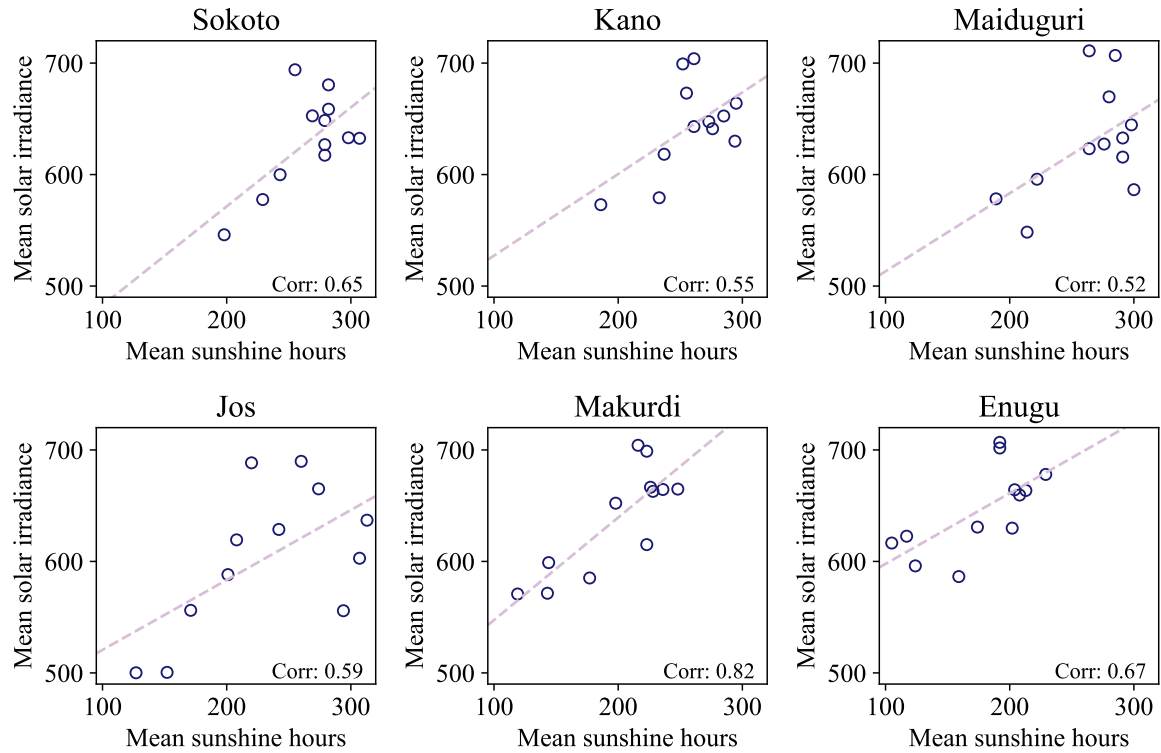

Figure 12: Mean monthly sunshine hours for six different sites in Nigeria are plotted against mean monthly solar irradiance estimates at those locations. Each point represents one of the twelve months. Data from the sites are from [Manfred J. Muller \(1982\)](#).
